

AMMAAR MUSTHAFA

Leicester, UK | ammaar20351@gmail.com | +44 7572 916395 | github.com/ammaar205

PROFILE

Software Engineering graduate (BSc 2:1, De Montfort University) with practical experience building full-stack applications, backend data pipelines, and systems-level programs. Currently developing FPL Oracle, a full-stack fpl-prediction platform with a React/Vite frontend, FastAPI backend, and a python prediction model from scratch. Strong foundation across the JVM (Java/Kotlin), Python, PostgreSQL, Docker, and REST APIs. Passionate about clean, maintainable code and continuously expanding personal projects to grow as an engineer.

TECHNICAL SKILLS

Languages:	Python, JavaScript/React, Kotlin, Java, C++, SQL, C#
Backend / APIs:	FastAPI, REST APIs, JWT auth, PostgreSQL, Firebase
Frontend:	React, Vite, Tailwind CSS, React Router, React Context
Infrastructure:	Docker (multi-container), Git, CI/CD principles
Methodologies:	Agile (Scrum), TDD basics, full SDLC
Other:	OpenGL, GLM, Jetpack Compose, Android development

PROJECTS

FPL Oracle - Full-Stack Analytics Platform | Python, FastAPI, PostgreSQL, React, Vite, Docker (Currently Working on)

- Designed a 9-table PostgreSQL schema and built a Python ETL pipeline ingesting live data from the FPL public API into a database using psycopg2.
- Exposed data via a FastAPI REST API; visualised in a React/Vite frontend. Containerised the full stack with Docker managing multi-container networking.

Fitness Tracker - Final Year Project | Kotlin, Firebase, Jetpack Compose

- Designed and built a full-stack Android application solo, from planning through functional testing and delivery, following Agile methodology throughout.
- Implemented secure cloud data storage and user authentication via Firebase; built entirely in Kotlin with OOP patterns.

Particle Physics Simulation | Python, C++, OpenGL, GLM, ModernGL

- Built a real-time particle simulation with physics and graphics rendering in Python (ModernGL); porting to C++ with OpenGL for performance and systems-level experience.
- Implemented sphere constraints, particle emission, and particle-particle collision detection.

EXPERIENCE

Technical Support Analyst | Beatormatch, Leicester

Jun 2024 - Feb 2026

- Diagnosed and resolved hardware/software faults in a client-facing technical environment, applying analytical problem-solving and root-cause thinking.
- Documented recurring fault patterns and resolution processes, demonstrating process-driven, quality-first approach directly transferable to software delivery.
- Managed high-volume customer communications, balancing multiple open cases simultaneously.

Security & Sales Assistant | ASDA, Leicester

Sep 2023 - Dec 2025

- Fast-paced customer-facing role; practised teamwork, adaptability, and clear communication under pressure.

EDUCATION

BSc Software Engineering - 2:1 | *De Montfort University, Leicester* 2022 - 2025

Relevant modules: Software Development Methods & Standards (Agile, TDD, SDLC), Database Design & Implementation, Operating Systems & Networks, Embedded Systems & IoT, Computer Programming, Fundamental Concepts of Computer Science.

ADDITIONAL INFORMATION

Full UK Driving Licence | Right to work in the UK | Actively building personal projects as a demonstration of continuous self-directed learning
